

Enabler Point of Sale

Reliable

Full integration across all Magenta Retail applications provides you with totally reliable data. Enabler point of sale incorporates full transaction recovery and roll back, replication and back up, transaction audits and internal database management processes.

Easy to Use

Enablers user interface has been developed and refined by retail specialists. Key strokes are minimised and work flow is logical. Many operator prompts are user definable, allowing you to use your terminology thereby further minimising training requirements. Enabler is also "touch screen enabled".

Fast

All fields within Enabler can be keyed, scanned or swiped allowing you to make full use of barcode and magnetic swipe technologies. You define the work flow and data capture requirements that suit your operation.

Flexibility

Enablers operation is defined by your business rules and requirements. A user interface that is easy to use allows you to determine all aspects of the applications function, including Enablers "look and feel".

Full Integration

Enabler output files are standard CSV format (comma delimited) and can be interfaced to host computer systems.

Open Architecture

Enabler Point of Sale operates with a wide range of peripheral equipment (attached to the Personal Computer or integrated POS system) including;

Cash drawers	Magnetic card readers
